

SPAN

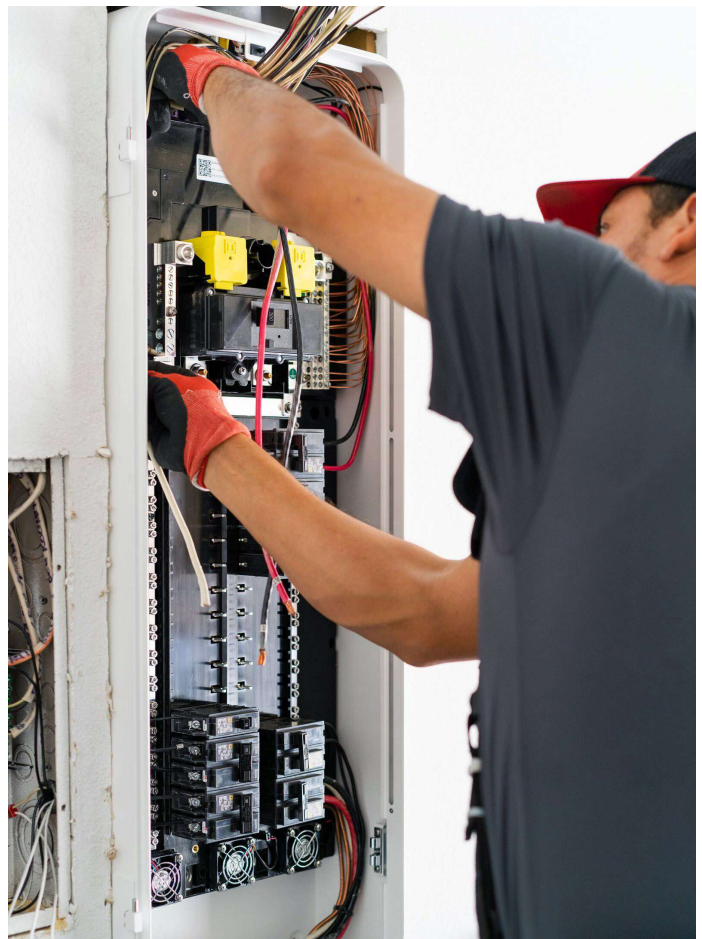

SPAN in homes with many circuits

SPAN can be installed in homes that have 32+ circuits

Install multiple SPAN Panels to accommodate all your loads for the best home energy management experience.

Or, if you prefer to replace only a single panel with SPAN you can:

- ⚡ Use tandem or quad circuits to get all circuits in a single SPAN panel.
- ⚡ Move low priority loads to a sub-panel downstream.

Important to consider

Tandem and quad circuits are visible & controllable as a single circuit in the SPAN Home app. Sub-panel will be monitored with the SPAN Home app at the sub-panel level.
